

Weekly Review—March 22, 2024

As expected, policy makers this week kept its benchmark overnight rate unchanged at 5.25% to 5.50% while reaffirming recent forward guidance for three rate cuts by year end. Understanding that the amount of data used by the Fed to determine monetary policy is likely comprised of thousands of data points contained on hundreds of pages, their policy actions are likely not based on a single data set found on a summary dashboard. But if it was, the below Economic Snapshot might be worthy of their review. Here’s a high-level overview of the data contained in the Snapshot.

The top graph reveals that over the last two years, the headline unemployment rate (U-3) has remained relatively steady and down from it’s pandemic-induced recession highs. Over the last year, the rate has started to trend higher. From the Fed’s “maximum employment” mandate, the labor market remains mostly stable based on this metric. There is little reason yet to lower benchmark rates.

Using the Fed’s preferred measure of inflation (Core Personal Consumption Expenditures – PCE YOY), the middle graph shows that year-over-year inflation continues trending lower. *Fun fact: It took a year after inflation first breached their 2% threshold before policy makers took action to battle high prices by increasing benchmark rates. Their year on the sidelines was their “transitory” period.* From the Fed’s “stable price” mandate, inflation remains above target. Consistent with prior guidance, the Fed still wants to see more evidence that inflation is coming down towards their 2% goal before starting to cut rates.

And finally, understanding that monetary policy is the Fed’s tool to control the money supply and the supply of money impacts overall economic growth. The bottom chart measures the change in economic growth – captured by Gross Domestic Product (GDP) – a broad-based measure of the overall health of the U.S. economy. While quarterly growth has been strong, the concern is its recent downward trajectory. Policy makers will be challenged in continuing their battle to drive inflation lower if/when it comes at the cost of economic growth.
